

## ABSTRACT OF THE DISCLOSURE

The steering wheel high beam switch provides a switch at the ten and/or two o'clock position on a steering wheel to permits a driver to quickly locate the high beam switch of a vehicle and turn on the high beams without removing hands from the steering wheel. The switch is positioned in a recess on the backside of the steering wheel not visible to a driver. Wiring through the steering wheel connects the switch with the vehicle's headlight switch, the high and low beams of the vehicle and the high beam indicator lamp in the vehicle's dashboard display.
